

QUALITY POLICY IMPACT CLEAN POWER TECHNOLOGY S.A

Impact Clean Power Technology S.A. is an innovation technology company manufacturing energy storage systems based on modern technology solutions applied for design of electrochemical cell chemistry, electronic management circuits and control software.

Our mission is to achieve and maintain position of an innovative, world recognized manufacturer of energy storage systems (ESS) destined for application in electrically propelled public transport vehicles (EV), telecommunication, energy distribution, automated guided vehicles (AGV) and industrial equipment.

The priority is given to fulfil requirements of the automotive branch considered as the most progressive market for energy storage systems.

Accomplishment of the mission is realized in cooperation with world recognized leaders in automotive branch, telecommunication, energy production and industry.

Realisation of the Company mission is respecting requirements of Corporate Social Responsibility (CSR) including potential benefits for customers, investors, employers and suppliers and also taking care about close neighbourhood and environment.

Effective launch of the established mission is supported by determining and monitoring the following strategic objectives:

1. Focusing on fulfilment of customer requirements to be ahead of customer expectations by maintaining partnership relations, monitoring customer satisfaction and effective reacting on reported issues.

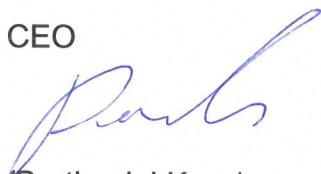

2. Planning investment allocation promoting development and continuous improvement of the company to maintain position of the world recognized innovative manufacturer of energy storage systems and to increase Company profits.

3. Monitoring world achievement of modern technology applied for design of electrochemical cell chemistry, electronic management circuits and control software in order to update knowledge and improve personnel's competences by participation in advanced trainings, seminars and conferences.

4. Maintaining and developing relations with suppliers based on mutual trust in order to achieve benefits from the cooperation and improvement of quality of the purchased products and services.

5. Extending certification of the implemented Quality Management System conforming to ISO 9001:2015 standard and AQAP 2110:2016 publication to cover the requirements of automotive branch according to specification IATF 16949.
